

**Save money and energy with VPhase**

VPhase (above) has launched a brand new low-cost technology that can give householders immediate and significant savings on their electricity bills and a reduction in carbon emissions, without any change to their lifestyle.

The VPhase unit uses voltage optimisation technology. Keeping the incoming voltage at a constant lower level, a single VPhase can save you money and energy across your whole home. Many electrical appliances work more efficiently and use less electricity at a much lower voltage. If every household in the UK used voltage optimisation, a typical home could save carbon emissions of 270kg every year – this would be the equivalent of taking 2.3 million cars off the road. Dr Lee Juby, CEO of VPhase says: "Based on our tests, on appliances such as fridges and freezers, a VPhase unit can deliver a massive saving of 17%, light bulbs can show savings of 15%, and even energy saving light bulbs can save an additional 10%."

**Best of British from Sweet Dreams**

A divan from Sweet Dreams (below) makes a beautiful centrepiece for any bedroom. The company offers a wide range of carefully created choices to "provide you with the perfect sleeping partner".

Serious comfort and superb styling meet in the best of British manufacture. Sweet Dreams beds have been very popular since the company started out in 1988, and in 2009, in recognition of people's need for storage, it has introduced an

Ottoman option to almost all its divans.

Ottomans come into their own when you haven't the space around your divan to fully open drawers. Just use the spring loaded action to easily raise the mattress, and the cavity inside the base offers a large storage space.

To find Sweet Dreams' retail partners, go to the Stockists section on its website.
